1.0 INTRODUCTION

The Douglas Aircraft Company (DAC) C-6 Facility is located at 19503 South Normandie Avenue, Torrance, California (Figure 1). Quarterly groundwater sampling is being conducted in response to the California Regional Water Quality Control Board - Los Angeles Region correspondence to DAC, dated 7 April 1992. This report summarizes laboratory analytical data generated through the chemical analysis of groundwater samples collected during the period of 7-8 June 1993, Second Quarter 1993.

2.0 QUARTERLY MONITORING PROGRAM

Second Quarter 1993 groundwater sampling was performed in accordance with standard sampling procedures. Static water level depths were measured on 7 June 1993 prior to initiating purging of groundwater from any observation wells. Static water depths were also measured 8 June 1993 on monitoring wells (MW-9, MW-18 and MW-19) located in the southern portion of DAC property installed for the Montrose Chemical Corporation Remedial Investigation.

Groundwater samples were collected from the following wells and chemically analyzed for volatile organic compounds (VOCs) by EPA Method 8240/8260 for the Second Quarter 1993. EPA Method 8240/8260 has more stringent laboratory QC requirements than EPA Method 8240. In addition, 15 more constituents are analyzed and reported using EPA Method 8240/8260.

WCC-1S, WCC-2S, WCC-3S, WCC-4S, WCC-5S, WCC-6S, WCC-7S, WCC-8S, WCC-9S, WCC-10S, WCC-11S, WCC-12S, WCC-1D, WCC-3D, and DAC-P1.

Table 1 summarizes observation well construction details. Table 2 summarizes the results of chemical analysis of groundwater samples and duplicates. Table 3 summarizes available measured groundwater elevations to date. Copies of laboratory data sheets, laboratory/field Quality Control data sheets, groundwater purge and sample forms, and Chain-of-Custody records are included in Appendices A, B, C, and D respectively.

2.1 Groundwater Sampling Procedures

Prior to collecting groundwater samples from each well, groundwater was purged using an electrical submersible pump that was temporarily installed into the observation well. Observation well WCC-1S was purged with a bailer since the 2-inch casing size would not accommodate a pump. After lowering the pump to the approximate mid-point of the saturated well screen, approximately three to five wetted casing volumes of groundwater were purged from the well until the following groundwater monitoring parameters had stabilized to within 10% of preceding readings: pH, electrical conductivity, temperature and clarity. Purged groundwater was stored onsite in DOT approved 55 gallon barrels pending the results of laboratory analysis of samples.

Following groundwater purging, the submersible pump was removed from the well and a representative groundwater sample was collected using a steam-cleaned stainless

was lowered to the approximate mid-point of the saturated well screen interval and retrieved to ground surface. The contents of the bailer were discharged into three labelled 40-ml capacity vials, preserved with HCL.

2.2 Field QA/QC Procedures

One blind duplicate groundwater sample was collected each day from selected observation wells for Quality Control purposes. Duplicates were collected in four HCL-preserved vials and identified by inserting the collection date after "DW-". For example, a duplicate sample collected on 7 June 1993 was identified as "DW-060793". No further sample identification was provided to the laboratory. Duplicate samples were taken from observation wells WCC-1D and WCC-9S.

To verify that the groundwater samples were not exposed to analytes during storage and transportation to the analytical laboratory, trip blanks were chemically analyzed for VOCs. One trip blank was placed in the ice-cooled storage/transportation chest when the first groundwater sample was collected each, and transported to the laboratory with the day's samples. Trip blanks were identified following a similar protocol to that used for duplicate water samples. For example, a trip blank prepared on 7 June 1993 was identified as "TB-060793".

Following decontamination of the bailer by steam-cleaning, and prior to collection of groundwater samples from successive wells, a field blank was prepared for laboratory analysis. Each field blank was prepared by pouring Reagent Grade II (Milli-Que) water, prepared by the analytical laboratory, through the bailer and discharge spigot and collecting the rinsate in one 40-ml vial preserved with HCL. Field blanks were identified following a similar protocol to that used for duplicate water samples. For example, a field blank prepared on 7 June 1993 was identified as "FB-060793". The wells prepared before and after field blank preparation were recorded. The field blank on 7 June 1993 was collected after sampling well WCC-11S and prior to sampling well WCC-2S while the field blank on 8 June 1993 was collected after sampling well DAC-P1 and prior to sampling well WCC-3S.

All groundwater, duplicate, trip blank and field blank samples were transported in ice-cooled chests to Terra Tech Labs, Inc., Irvine, California using U.S. EPA-recommended Chain-of-Custody procedures.

3.0 EVALUATION OF ANALYTICAL RESULTS

3.1 Groundwater Gradient

Groundwater levels were measured prior to sampling on 7 June and 8 June 1993 (Table 3 and Appendix B). An estimated potentiometric surface map for the shallow zone is presented as Figure 4. The groundwater gradient in the shallow zone was generally south-southeast with a southerly trough-like depression in the vicinity of observation wells WCC-7S and WCC-12S based on June 1993 measurements. Insufficient data (two wells) are available to define the groundwater gradient in the deeper zone.

3.2 Analytical Data

The results of chemical analysis of groundwater and duplicate samples are summarized on Table 2. Duplicate groundwater samples are indicated by an asterisk and are presented with the "original" groundwater sample. This table includes cumulative analytical data for all monitoring wells and includes detection limits (where available) for the listed chemicals.

The following observations are noted:

- Data for groundwater samples collected from well DAC-P1, located at the upgradient property boundary, indicate that TCE concentrations have increased from 21,000 micrograms per liter ($\mu\text{g}/\text{L}$) to 28,000 $\mu\text{g}/\text{L}$ coming onto DAC's property. This data is consistent with prior sampling events. DAC-P1 is screened in the shallow zone.
- Background concentrations of TCE and 1,1DCE in the shallow zone upgradient or cross gradient wells WCC-11S, WCC-10S, and WCC-2S have remained in the range of greater than 100 $\mu\text{g}/\text{L}$ and tens of $\mu\text{g}/\text{L}$, respectively.
- Groundwater elevation data (Figure 4) and chemical concentration data (Figure 3) indicate that chemical transport in the shallow zone is in a generally southerly direction in the vicinity of buildings 36 and 41. Chemical concentration data from the eastern boundary observation wells (WCC-5S, and WCC-9S) are within the same range or lower than upgradient or cross gradient "background level" wells (WCC-10S, WCC-2S and WCC-11S). Therefore, the data do not suggest chemical migration offsite from an onsite source.
- The First Quarter 1993 report noted anomalous data for several chemicals present in wells WCC-3D and WCC-3S. The recent chemical data shows that concentrations have returned to their historical ranges suggesting questionable First Quarter results.
- Concentrations of MIBK and Toluene increased from 3,900 $\mu\text{g}/\text{L}$ to 13,000 $\mu\text{g}/\text{L}$ and 10,000 $\mu\text{g}/\text{L}$ to 21,000 $\mu\text{g}/\text{L}$, respectively in well WCC-6S while other chemicals have remained at their recent concentration ranges. This is the first substantial increase in concentrations observed in WCC-6S over the last four quarters. Data from this quarter should be compared with results of future quarters to assess accuracy of the Second Quarter 1993 results.

SUMMARY OF GROUNDWATER ELEVATION DATA
GROUNDWATER MONITORING DATA SUMMARY REPORT
 SECOND QUARTER 1993
 DOUGLAS AIRCRAFT C-6 FACILITY
 TORRANCE, CALIFORNIA
 K/J 924010.01

Kennedy/Jenks Consultants

Reference Point Elevation (* Feet Above MSL) ¹	Observation Well	Water Level Elevation (* Feet Above Mean Sea Level)						
		11/13/87	10/18/89	06/15/92	09/21/92	01/05/93	04/09/93	06/08/93
MW-8	49.09	NA	NA	NA	NA	NA	NA	NA
MW-9	48.67	NA	NA	NA	NA	NA	NA	-20.58
MW-18	50.29	NA	NA	NA	NA	NA	NA	-20.88
MW-9	46.55	NA	NA	NA	NA	NA	NA	-20.13

Notes:

- 1 Reference point is north side, top of well casing
- 2 Data taken from Woodward-Clyde Consultants Phase II Report, May 1988
- 3 Data taken from Woodward-Clyde Consultants Phase III Report, March, 1990
- 4 N/A = Not available
- 5 Installed by Hargis + Associates, Inc. for Montrose Chemical Corporation
- 6 Reference point elevation measured by Hargis + Associates, Inc.
